SUMMARY

Backend software engineer with 4 years of experience building backend systems in Node.js, NestJS and TypeScript — currently working across Node.js, NestJS, PostgreSQL, Prisma, Redis, BullMQ and Docker on containerized, horizontally scaled infrastructure. Delivered multi-tenant SaaS platforms, queue-driven third-party integrations and OAuth 2.0 / passkey authentication, first as a freelance backend developer and now at Kasroad, while building two projects end to end and preparing both for production release. Owns data modeling, API design, security review, CI/CD and handover documentation, and uses AI coding agents as a force multiplier to ship full-stack products with a very small team. B.Sc. Software Engineering, University of Damascus.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES2022+), SQL, PHP, Java

Backend: Node.js, NestJS, Express.js, Fastify, REST API design, modular / layered architecture, WebSockets, Swagger/OpenAPI

Databases & Data: PostgreSQL, MySQL, Redis, Prisma, Sequelize, relational schema design, migrations

Async & Messaging: BullMQ, Redis job queues, retries and dead-letter handling, Firebase Cloud Messaging

Security & Identity: OAuth 2.0, Passkeys / WebAuthn, JWT, RBAC, multi-tenant data isolation, OWASP Top 10 review, Zod validation, SHA-256 + RSA

DevOps & Infrastructure: Docker, GitHub Actions CI/CD, horizontally scaled Node.js deployments, Redis Sentinel failover, Git / GitHub, Linux CLI, Postman, structured logging

AI-Assisted Engineering: Agent orchestration (Claude, GitHub Copilot, GLM), prompt engineering for code generation, AI-assisted code review and refactoring

WORK EXPERIENCE

Backend Software Engineer — Kasroad Sep 2025 – Aug 2026

Damascus, Syria (Remote)

- Own backend architecture and delivery for 2 products end to end — data modeling, REST API design, authentication, background processing and deployment.
- Orchestrated AI coding agents (Claude, GitHub Copilot, GLM) across backend and frontend repositories to generate and refactor ~90% of production code, cutting feature delivery from weeks to days while personally reviewing every change that ships.
- Established an OWASP Top 10 review gate and a GitHub Actions pipeline that builds a single Docker image and deploys on every merge to develop, to remove manual release steps entirely.

Freelance Backend Developer — Independent Contract Work Jan 2023 – Aug 2025

Damascus, Syria (Remote)

- Delivered REST APIs and relational data layers in Node.js / Express, NestJS and Spring Boot for client and university systems, covering schema design, JWT authentication and OpenAPI documentation.
- Translated written requirements into modular, documented services against fixed deadlines, to hand each system over in a state other developers could maintain without me.
- Worked across Node.js, PHP / Laravel and Java / Spring Boot to match each client's existing infrastructure rather than impose a single stack.

KEY PROJECTS

Non-VoIP OTP Number-Leasing Platform Kasroad · Sep 2025 – Aug 2026

Node.js · BullMQ · Redis Sentinel · WebSockets · Docker · OAuth 2.0 · Passkeys

- Built the leasing service on BullMQ and Redis queues with retries and back-pressure, to absorb slow provider calls.

- Deployed 4 horizontally scaled API instances over 4 Redis instances under Sentinel, to survive node failure.
- Placed multiple external OTP provider APIs behind 1 adapter interface, to swap providers without code changes.

XchangeCards — White-Label Multi-Tenant E-Commerce SaaS Kasroad · 2026

Node.js · PostgreSQL · Prisma · RBAC · Docker

- Built per-tenant data isolation at the data-access layer, to host branded storefronts on shared infrastructure.
- Engineered a multi-tier referral and commission engine with payout tracking, to reconcile balances exactly.
- Shipped 3 role-scoped interfaces — platform admin, store owner and storefront — behind a single RBAC model.

Digital Signatures Backend Freelance · Apr 2024 – Aug 2024

Node.js · Express.js · Sequelize · MySQL · SHA-256 + RSA

- Built a REST API for concurrent document signing on SHA-256 and RSA signatures, to guarantee integrity.
- Designed 4 related Sequelize models with foreign-key constraints, to give every signature a full audit trail.
- Implemented JWT middleware with role-based validation across modular /sign, /verify and /audit routes.

Pharmacy Warehouse Management System — Graduation Project Oct 2024 – Sep 2025

NestJS · PostgreSQL · Prisma · Laravel / Filament PHP · github.com/ObadahEssa881/Pharmacy_Warehouse_Management_Sys

- Modeled 15 relational entities across 16 feature modules, to digitize the full stock-to-sale workflow.
- Architected a NestJS REST API serving a Laravel / Filament admin panel, with JWT auth and RBAC across 3 roles.
- Covered the admin layer with a PHPUnit suite at 85%+ coverage, to keep operational logic regression-safe.

E-Learning Platform — Spring Boot Microservices Freelance · 2025

Java · Spring Boot · Spring Cloud · Eureka · JWT · Gradle · github.com/ObadahEssa881/spring_boot_microservice_project

- Built 5 independent services behind an API gateway with Eureka service discovery, to scale each domain alone.
- Validated JWTs inside every service, not only at the gateway, to keep a service protected if reached directly.

EDUCATION

B.Sc. Software Engineering — Faculty of Information Technology Engineering Oct 2020 – Aug 2025

University of Damascus, Damascus, Syria

- Coursework: Data Structures, Algorithms, Database Systems, Software Architecture, Distributed Systems, Cryptography.
- Technical moderator on 10+ team projects, leading architecture decisions and reviewing teammates' code.
